## Why Your Agency Needs ScreenSafe

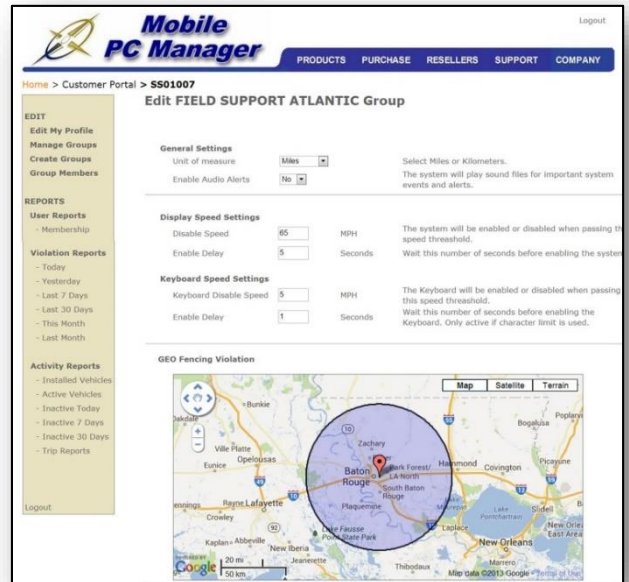

ScreenSafe is a Windows software only solution that allows a law enforcement agency to limit the officers ability to type while driving. The MDT keyboard can be either partially or completely disabled when the vehicle exceeds a specific speed. ScreenSafe does not interfere with any applications running on the MDT.

Law enforcement agencies can now ensure their existing "typing while driving" safety policies are being implemented by officers in the field. If an emergency, the officer can choose to override all restrictions and regain control of the MDT at any speed; a report of all overrides are recorded.

## What is the Cost of an Officer Involved Distracted Driving Accident?

**A great way to demonstrate your agency's commitment to reducing distracted driving accidents is by taking a pro-active stance to restrict typing without limiting your officers access to the MDT when needed.**

For a fraction of the cost of settling a single officer caused distracted driving accident you could equip your entire department with ScreenSafe. With ScreenSafe you can ensure officers are not only complying with departmental policies, but also are not putting the city or county at risk for a million dollar lawsuit.

## Key Features

- Disable Keyboard and/or Display
- Highly Customizable
- Web Based Administration
- Supports 5 to 5,000 vehicles
- Real Time Wireless Updates
- "Quick Peek" override option

### Minimum System Requirements

- Windows XP, Vista, Windows 7, Windows 8 or Windows 10
- 20 MB of Hard Drive
- 512 MB of memory
- CPU 1.8MHz or greater
- Wireless Communication

### Internal GPS Port Splitter & Sensor Program

This **FREE Feature** allows you to use either your Existing Internal GPS Antenna, GSM Locator or external GPS Antenna.
